

# The Norwegian Environmental Chemistry Symposium - NECS 2020

## INVITATION AND CALL FOR ABSTRACT

**14 – 16 September 2020, Hotel Alexandra, Loen, Norway**

In these Corona times, most of us are missing their professional environment. Hopefully, by mid-September the pandemic has calmed down so that we again can mingle. We therefore wish to invite the Norwegian scientific community in environmental chemistry to a refreshing and stimulating gathering in an informal setting at Hotel Alexandra, Loen, located in the beautiful fjord and glacier district of Norway. Due to the Corona-situation we focus on participation from Norway at this early stage of the planning.

### **Catching the pulse of Norwegian Environmental Chemistry 2020**

This symposium is addressing leading experts, authorities, regulators and scientists within all aspects of environmental chemistry. The symposium will provide an interdisciplinary platform for students, academic, industrial researchers and public managers to present and discuss the most recent advancements, trends and concerns as well as practical challenges and solutions in environmental chemistry.

Ten prominent environmental researchers and managers will be invited for plenary lectures to address the past, present and future issues of environmental chemistry. We invite you to provide an oral or poster presentation at this symposium. Suggested topics are listed below, though presentations on adjacent topics that enlighten environmental chemistry are also sought for. We sincerely hope that you will respond positively to this invitation and call for papers. Please inform your colleagues about this opportunity to share and discuss recent experiences and to be scientifically updated in a typical Norwegian informal setting. We look forward to your active participation in this scientific event.

- Marine, soil, sediment and air pollution
- Environmental analytical chemistry
- Ecosystems and biogeochemical cycles
- Environmental and human toxicology
- Environmental processes
- Food and nutrition
- Environmental management
- Waste handling and remediation
- Climate and environment in the Arctic
- Climate and environmental changes
- Biological systems
- Human and environmental health
- Occupational environments
- Consumer products
- National environmental legislation
- Green chemistry

### **Registration and Abstracts**

Register at our website [www.envirochem.no](http://www.envirochem.no) and send a one-page abstract to the Chairman by August 1, 2020.
